Treatment Description:

05/08/26 836# I walked up to the dog to relocate to Building 2, as I approached the kennel, I closed the divider to make sure the dog does not run to the outside part of the kennel. The dog ran to the corner of the inside and leaned up against the divider and started to growl. I opened the gate and I went eye level to the dog and waited a couple minutes to ease off any tension between the dog and I. The dog showed no signs or improvement. I proceeded to offer the dog a snack and he still showed no interest. I proceeded to attempt to leash the dog slowly and the dog showed teeth and growled and was very tense. No other attempts were made as to not escalate stress with the dog or risk a bite incident.
